

Safe Passage is a LOT Easier

..... When we smooth out Life's Little Bumps!

We all hate those nasty “pot holes” or “chuck holes” that we “Experience” on our highways during the Winter and Early Spring months. Many of us have had an opportunity to express our thoughts concerning any roads that are not repaired quickly each Spring.

Just like those pot holes on the highways, those seemingly small bumps caused by shifting concrete blocks in the front sidewalk can present a much larger barrier for a disabled person in a wheel chair, using a walker, or navigating without sight.

The person who left this Flyer is requesting that you do a little extra to make their passage on your front Sidewalk smoother and safer.

Whether a Veteran in a wheel chair, a blind neighbor, a new mommy with her baby carriage, an In-Line Skater, or a youngster on a bicycle, we all have one common need:

*A Smooth
Sidewalk as we
move through your
neighborhood.*

We hope that we can count on your support, as the Sidewalk Savers solution shown on the next page is low cost and easily done.

Thank you!
